

Abstract of the Disclosure

5 This invention is concerned with human organic anion transporter
("hOAT"). Isolated nucleic acid encoding hOAT is provided, along with
ioslated hOAT polypeptide. hOAT nucleic acid and/or hOAT polypeptide are
employed in transgenic animals, recombinant cells, replicable vectors and
analytical procedures for identifying hOAT agonists or antagonists, assays for
10 identifying hOAT alleles and/or isotypes, screening tests for nephrotoxic or
neurologically active compounds, and determination of drug-drug interactions
within the kidney or brain.
